

Third Meeting of the Global Partnership for Business and Biodiversity

AGRICULTURE & BIODIVERSITY

Aichi Biodiversity Goals

- [Strategic Goal A](#): Address the underlying causes of biodiversity loss by mainstreaming biodiversity across government and society
- [Strategic Goal B](#): Reduce the direct pressures on biodiversity and promote sustainable use
- [Strategic Goal C](#): To improve the status of biodiversity by safeguarding ecosystems, species and genetic diversity
- [Strategic Goal D](#): Enhance the benefits to all from biodiversity and ecosystem services
- [Strategic Goal E](#): Enhance implementation through participatory planning, knowledge management and capacity building

Targets where we can contribute

By 2020, at the latest, people are aware of the values of biodiversity and the steps they can take to conserve and use it sustainably.

By 2020 areas under agriculture, aquaculture and forestry are managed sustainably, ensuring conservation of biodiversity.

By 2020, at least 17 % of terrestrial and inland water, and 10% of coastal and marine areas, especially areas of particular importance for biodiversity and ecosystem services, are conserved through effectively and equitably managed, ecologically representative and well connected systems of protected areas and other effective area-based conservation measures, and integrated into the wider landscapes and seascapes

By 2020, ecosystem resilience and the contribution of biodiversity to carbon stocks has been enhanced, through conservation and restoration, including restoration of at least 15 per cent of degraded ecosystems, thereby contributing to climate change mitigation and adaptation and to combating desertification.

By 2015 each Party has developed, adopted as a policy instrument, and has commenced implementing an effective, participatory and updated national biodiversity strategy and action plan. .

How can agri-business be part
of the Solution?

Specific CBD targets and our
role there...

Monsanto Partners & Strategic Goals & Targets for 2020

Reaching each CBD Goal with one solution through one partner

Agriculture and Biodiversity Hotspots* across the world: Conserve More & Produce More Sustainable Agriculture Ecosystems Partnerships

*Areas under pressure and with high value of biodiversity:

Next Steps

- Define Capacity Building Process across the chain
- Link with Global Goals such as Action 2020
- Reinforce multi-stakeholder partnership
- Ensure the link between social and environmental goals

TEEB

Table 6.2: Framework for integration of valuation and benefits

	Company	Farmer	Local community	Wider stakeholders (global/governments)
Reduced anthropogenic impacts	Improved corporate reputation, meet targets and mission aims, risk management of future legislation and resource costs	Potential reduced costs of inputs.	Improved local environment through lower use of agrochemicals etc.	Wide reaching social and environmental improvement
Carbon sequestration	Improve carbon footprint and net impact of operations			Potential to support carbon targets and policies.
Flood protection, soil erosion protection, air regulation	Security of supply chain and market	Protection of land through ecosystem services	Improved land and local environmental quality. Protection against natural damage such as soil erosion and flood.	
Improved biodiversity	Supports company principles and supports wider ecosystem services	Benefits to land gained through ecosystem services supported by biodiversity.	Improved land and local environmental quality through ecosystem services supported by biodiversity	Potential to support biodiversity targets and global agendas.
Provisioning services	While primary provisioning services (e.g. the supply of oil palm and soybean) may be reduced, additional provisioning services may be captured.	While primary provisioning services (e.g. the supply of oil palm and soybean) may be reduced, additional provisioning services may be captured.	Offers potential supply of native fruit and seeds, encouraging wider trade of local products (for example the growing trade of cerrado fruit pulp ice cream)
