

GROUP 5

- 1. NBSPAs as important tool in implementing GBF:**
 - Continue with the good work
 - Update post 2020 (maybe not the whole NBSAP, but elements), Agree on deadline and guidelines in COP16 +
- 2. The NR is needed; but now too complicated at the moment.**
 - The need for more comparable, possible automated data (spatial).
 - Regular intervals
 - Right level of details to make sure everyone can report.
 - Few core Global indicators with baseline to be reported by all.
 - Spatial data required for the core indicators and later reporting

3. Improve existing review mechanisms (strengthening them through capacity building and financing)

- National report should be picked up and reviewed properly**
- Stronger link between national efforts and global targets**
- Other mechanisms e.g IPBES could play a part**
- Global stocktake in addition to NR and indicators.**
- Not punitive, but facilitative and participatory.**
- Stocktake should cover all elements of post 2020, not just targets but means of implementation.**
