

Success stories from Helsinki Finland for the whole world,
for conserving and sustainable use of biodiversity, in all regions and areas

LuontoPortti  NatureGate

We have created NatureGate Online Service for rapid species identification to conserve sustainability and to promote sustainable use of biodiversity:

<http://www.iucn.org/about/union/commissions/cec/?2614/>

It has been success. Now it is possible to identify a wild flower, a tree or shrub. A fish species identification tool is also open to the public.

All biodiversity ought to be enjoyed and used sustainably. Admiring, enjoying local nature, taking photos of it, is sustainable use of biodiversity.

Best wishes

Mauri Ahlberg FLS

Professor of Biology and Sustainability Education <http://www.helsinki.fi/people/mauri.ahlberg>
